Score  
**54/60**

94 errors were detected in 5156 words of the manuscript

#### References

35 references in the article  
No self-citations of the author  
Latest reference is 1 year old

Score  
**38/40**

#### TOTAL SCORE

**92**

# Additional report metrics

## Tables and Figures

Some tables and figures do not seem to be cited in the manuscript.

## Inclusive language

The manuscript was checked for racist, sexist, and abusive language.

**PASS**

## Ethical declarations

No ethical declarations were identified.

## Commercial declarations

No perceived or potential commercial declarations of interest were identified in the manuscript.

Abstract

Language  
Quality

Good

If a manuscript contains language and grammar errors, it can deflect peer reviewers' attention from the substance of the paper to the writing style and make it difficult for them to discern the author's intended meaning, thus hindering assessment and acceptance. Below is an assessment of your manuscript's language basis adherence to grammar rules, use of non-native constructions, word choice, writing style, and use of correct spellings.

This report was generated automatically by AI services. It is not meant to replace human evaluation or editing services and results should be interpreted with care.

94 Issues

[View all errors](#)

The method applied in this study **was** quantitatively associated.

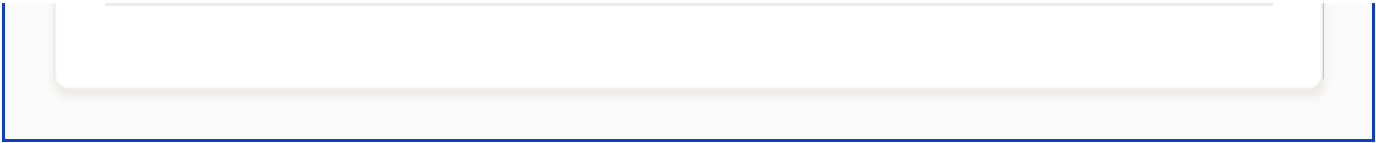

The verb "was" appears to be in the incorrect tense; consider revising it to "is."

In this study, the compliance rate of Sharia banks was measured using the profit-sharing ratio (PSR), Islamic investment ratio (IIR), and Islamic income **ratio** (IsIR).

Please check if the plural form of "ratio" should be used.

**In part**, size and complexity have significantly positive effects on fraud.

Consider deleting "In part ," if appropriate.

Abstract

## Relevance of References

No outdated references

Proper referencing of other works used to build on the study is important; it is recommended that sources cited be more recently published. However, as the pace of scientific development differs across fields, each source must be evaluated on a case-by-case basis. Unless citing seminal research that may be quite old but still relevant, it is important to ensure that recent sources (less than 10 years old, by date of publication) are cited, when available. We have categories references as below:

- Recent references: References refer to the sources which are less than 10 years old, by date of publication.
- Outdated references: References refer to the sources which are more than 10 years old, by date of publication.
- Unknown References: References refer to the sources which do not have a year of publication.

The manuscript does not contain any outdated references. All sources cited in your manuscript are recent and timely.

## Self-Citations Check

No self-citations found

Citing one's own work is inevitable, especially when building upon previous research in a new article. However, including a large number of self-citations in a manuscript is discouraged. This practice may represent excessive self-promotion or impartiality, which is frowned upon in scientific research, and thus must be refrained from as much as possible.

Your manuscript appears to contain no self-citations.

## Table and Figure Citations

Not cited

Tables and figures help authors present detailed results, complex relationships, patterns, and trends concisely. Every visual element included in the manuscript should be mentioned in the text. There are chances that tables or figures may not get printed if they have not been cited in the text. This check helps authors identify if the all tables and figures included in the manuscript have been cited in the manuscript.

We detected following Tables (7) and Figures (0) in the manuscript text.

### Tables

- Table 1. Operational Variables
- Table 2. Chow Test
- Table 3. Common Effect Model Test Results
- Table 4. Coefficient of Determination Test ()
- Table 5. Simultaneous Significance Test (F-Statistical Test)
- Table 6. Partial test (t-Statistical test)
- Table 7. The proportion of Sharia Bank Financing

Some table and figure citations appear to be missing from the text. Please check below and revise appropriately.

Abstract

Inclusive  
Language

Non-inclusive language not found

It is important for authors to be aware of the ways in which the use of language can marginalise, demean, and exclude social groups such as women, sexual minorities, ethnic groups, persons with physical or psychosocial disabilities, etc., and thus to refrain from using such non-inclusive language. Below is an assessment of whether the language of your manuscript is inclusive or it contains any offensive, racist, sexist, etc. words that are deemed inappropriate. Note we do this by searching the manuscript for certain words. We do not evaluate context, so do not claim to catch all examples of e.g. content which could be described as sexist, but doesn't use any of the words on our watchlist.

Your manuscript does not contain language that can be considered offensive or non-inclusive in publication.

## Structural Completeness

Key sections missing

Research papers generally follow a standard structure in which information is presented. This allows readers to easily find the required information by looking it up under the relevant section. The structure varies for different article types, style guides, journal requirements, etc. Hence, it is critical to ensure that a manuscript is logically and consistently organized with all the required sections present. Please carefully check the below results for your manuscript. Additionally, check the submission guidelines for specific requirements and ensure structural completeness.

Some important sections seem to be missing from the manuscript.

### The following sections were present in the manuscript

- Title
- Abstract
- Keywords
- Introduction
- Literature Review
- Results And Discussion
- Discussion
- Other
- Conclusion
- References

Additionally, you may be expected to include the following major sections

- Methods

## Declaration of Conflicts of Interest

Not found

All authors should disclose in their manuscript any financial and personal relationships with people or organizations as these could be viewed as inappropriately influencing their work and hindering transparency. The declarations help the editorial board assess any real or perceived conflicts of interests and biases, facilitating a fair assessment of the manuscript. If there is no disclosure to be made, that should be clearly mentioned too. Check the submission guidelines for accuracy of format and placement of this declaration.

Declarations regarding financial associations or competing interests were not found in your manuscript.

## Ethical Use of Images

Issue found

When a manuscript contains images of human participants, the privacy of the participants should be respected by maintaining confidentiality and masking any identifying features. Failing to do so can even lead to the rejection of the manuscript. Therefore, check the below results and ensure the submission guidelines related to reporting of clinical data are followed.

Human-identifying image/s have been found in your manuscript.

## Author Details

Found

The publication process may involve multiple transactions between the journal editorial board and the authors. The corresponding author is responsible to take charge of such transactions and facilitate smoother publication. It is thus important to include complete correspondence details. The correspondence details also facilitate communication with readers and fellow researchers.

Your manuscript contains author correspondence details. Additionally, please check the submission guidelines for specific requirements, for example, those relating to blinding.

Abstract

## Ethical Declarations

Not found

Ethical declarations form an integral part of the submission process of a manuscript. If the study involves human subjects, the author should declare whether written informed consent was obtained. Likewise, if the manuscript includes case reports/case series, appropriate details should be provided. In case of animal subjects, the authors should declare whether the investigative methods conform to the standards of good research practice. Failing to do so is considered a breach of ethics and can hinder acceptance. Below is an assessment of whether such declarations are present in your manuscript. Please ensure that you check the submission guidelines on the format, inclusions, and placement of these declarations.

No ethical declarations have been identified. If your study had human participation or involved experiments with animals, you must declare compliance to the relevant ethical guidelines.

## Citation in Abstract

Found

Avoid citing sources in the abstract of your manuscript. There are two reasons for this: First, your abstract should focus on your original research and not on the work of others. Second, it should be self-contained and fully understandable without reference to any other sources. R Pubsure identifies and picks out citations if found in the abstract of your manuscript. It will also notify in case no such statements are found.

We have found few citations in the abstract of your paper. Kindly avoid adding citations to the abstract of your manuscript. They are -

- The results of this study indicate that Sharia compliance (PSR, IIR, and IsIR), size, and complexity simultaneously have a significant effect on fraud in Sharia banks with probability levels of 0.0002 and 0.0237.
- Sharia banks have probability levels of 0.1056, 0.7866, and 0.3817 for compliance (PSR, IIR, and IsIR, respectively).
